I am a long time modeler and it takes a lot to impress me with a new tool, book, or model Mr Hoover has done that. I purchased the spiral bound as it will work nicely on my workbench. The paper is heavyweight and glossy. You will find color pictures and great detail shots on how to put a beautiful but difficult model together. He even goes further and hi-lites in yellow areas that pertain to the Eduard pieces that are added. The book starts with pictures of all the sprues and Eduard photo etch and decals that he used. Then to a FLOW CHART(how many of us ever tried to do that one). Next He gives a summary on all the tools, paints, etc that he used and if that wasn't enough he included where he purchased them(there goes my modeling budget).That is Four(4) pages worth ! Then to the model itself. Step by step he proceeds telling you how to put it together, adding comments where needed. Pictures and or drawings included. I have already sent a note asking him to do one for the 1/32 OV-10D. This is not only a HOW TO on the King Fisher but a how to on airplane modeling.< [Less](#)
