

This book contains detailed instructions on building the A-4E/F Skyhawk 1/48 scale model aircraft from eduard.

In addition to the kit's instructions, there are 2 aftermarket kits with eduard's 48644 and 48851 set - each with their own instruction. Can you imagine merging all of these instructions? Well, I've done that for you and more. I take the model kit instructions from eduard along with the eduard AM sets and break them up into individual steps.

The aftermarket steps are colored gray making them easy to skip if you just have the basic model. This book provides a little history of the Skyhawk, photos of the aftermarket kits, a detailed list of tools that I used to build this model, along with a list of paints. The actual instruction section contains 679 steps and 89 plus figures over 115 pages that tell you what to dry fit, glue, and/or paint for each individual piece. Each step instruction shows the source (i.e., either eduard or AM) along with a block to mark that you completed the step.

I provide an index of the individual sprue parts that show where in the book the part is mentioned. This index was a great way to make sure that no pieces were overlooked. Finally, there are several pages of in-process photos with assembly tips and the final photos of my build for reference. This book is a great checklist to make your build go smoothly. Of course, you can feel free to use different tools, paint, weathering, etc. or even add your own diorama. I hope you find this book useful. See a 16-page sample along with photos of finished models and other books at [glennhoovermodels.com](http://glennhoovermodels.com).
