

This book contains detailed instructions on building the S2F Tracker 1/48 scale model aircraft from Kinetic (Kit 48024).

In addition to the kit's instructions, the book also includes Eduard's BIGED sets 4965 and 49277. Can you imagine merging all of these instructions? Well, I've done that for you and more. I take the model kit instructions from Kinetic along with the Eduard AM sets and break them up into individual steps.

The aftermarket steps are colored gray making them easy to skip if you just have the basic model. This book provides a little history of the Tracker, a detailed list of tools that I used to build this model, along with a list of paints. The actual instruction section contains 666 steps and 100 plus figures over 136 pages that tell you what to dry fit, glue, and/or paint for each individual piece. Each step instruction shows the source (i.e., either Kinetic or AM) along with a block to mark that you completed the step.

There are several pages of in-process photos with assembly tips and the final photos of my build for reference. This book is a great checklist to make your build go smoothly. Of course, you can feel free to use different tools, paint, weathering, etc. or even add your own diorama. I hope you find this book useful. See a multi-page sample along with photos of finished models and other books at [glennhoovermodels.com](http://glennhoovermodels.com).

S2F Tracker Model: How to build the S2F Tracker Model from Kinetic (A Glenn Hoover Model

Build Instruction Series)
